

Supporting the people who support us.

EAS welcomes conversations with civil servants and government bodies, the NHS, ambulance, police, fire and rescue services, and associated support organisations. Build relevant capability around service responsibilities and public trust.

Shared foundations. Different pathways. Continual growth.

Trust, ethics, privacy, security, inclusion and human judgement.

Reuse the core. Tailor the application. Retain your identity.

Start with suitable work

Explore approved administrative, communication and organisational tasks. Use public or synthetic examples before considering any operational information.

Strengthen judgement

Practise checking accuracy, recognising limitations and escalating decisions. Human accountability remains central to public-service work.

Share foundations, not rules

Reuse common learning while preserving each service's professional standards, operating procedures and information-governance responsibilities.

PLAN THE DELIVERY

Agree a service lead, suitable cohort, shift-aware timetable and support. Start with a bounded activity and confirm permissions, review and escalation before delivery.

AGREE THE OFFER

Preferential terms can be discussed for eligible public-service and associated organisations. Agree scope, fees, supported places and procurement requirements individually; supplier eligibility is not automatic.

TRUST IN PRACTICE

Do not upload patient, victim, witness, incident or other sensitive operational information into learning tasks or unapproved tools. Specialist applications require separate professional and organisational approval.

CHOOSE THE PATHWAY

Use Foundation and Bronze where relevant, then deepen or refresh learning according to role and responsibility. Completion does not authorise clinical, policing, emergency or other safety-critical decisions.

EVIDENCE AND RECOGNITION

Review useful work, checking quality and decision explanations. EAS recognition records reviewed learning, not professional accreditation, regulator endorsement or permission to deploy AI.

Bring a service priority, an accountable lead and a safe task.

Discuss public-service support
