

Useful AI capability. Built around your business.

Help a small team apply AI to worthwhile tasks, check the results and build better working habits. EAS connects learning with your priorities without asking you to create a training programme from scratch.

Shared foundations. Different pathways. Continual growth.

Trust, ethics, privacy, security, inclusion and human judgement.

Reuse the core. Tailor the application. Retain your identity.

Start with a real need

Choose a bounded task such as drafting a customer message, preparing a public-information summary or improving an internal template.

Make room to practise

Give colleagues time to test approved approaches, share what works and stop what does not. Build confidence alongside judgement.

Keep the value in-house

Develop internal champions where useful. Retain your processes, customer relationships and expertise while reusing common learning resources.

PLAN THE DELIVERY

Agree a small cohort, an accountable manager and the right balance of guided sessions, practical work and review. Measure quality and total time, including checking and rework, before claiming savings.

AGREE THE OFFER

Agree the learners, levels, facilitation, review time, support, tool licences and fees in a written proposal. No fixed intake, included Gold places or external funding is assumed.

TRUST IN PRACTICE

Use public, fictional or appropriately anonymised examples. Keep personal and confidential business information out of unapproved tools. Learning about governance is not independent assurance of your systems.

CHOOSE THE PATHWAY

Start at the appropriate point. Foundation and Bronze can establish safe practice and application; Silver A, Silver B or Gold should follow only where responsibilities and goals require greater depth.

EVIDENCE AND RECOGNITION

A useful outcome is a checked work sample, a defensible recommendation and an agreed next step. Any EAS completion recognition follows review against the relevant criteria.

Bring one business task and the people who use it.

Discuss an SME pathway
